Remember to write your name and class as well. You may want to include some illustration.

My Ideal School

My ideal school would be a computer school, which teaches students how to play popular games and repair computers. The facilities will include computer labs, computer repair rooms, a multi-media room and a café, where the students can have a break, when needed. They would be perfect as the students can play games, repair computers, view tutorials and have a break. The teachers will include computer repairers, computer gamers and IT experts. All of them will be helpful and caring. The teachers will teach them the basics about computing, and even how to handle IT devices.

The classmates in the school can be IT geeks, computer repairers, gamers and even people who are interested in IT. This is good as the classmates can help others who are weak in IT, and introduce it to people who have little or no experience. The timetable is pretty simple, playing different games per 2 hours, and repairing computers for $1\frac{1}{2}$ hours. The students can learn how to play different kinds of games, and how to install hardware, the operating system and software.

The subjects would have to set the BIOS settings, install basic hardware like hard-disk drives and CD-Rom drives, install all kinds of software and play popular games. They can have a hands-on experience on computer fixing, gaming and threat removal. The location is probably in Orchard Road and somewhere near Wisma Atria shopping centre. After school, the students can hang out there, but not for too long! The students can wear home clothes as their school uniform and the school hours are not so long. They are also not restricted and can have fun while there. I wish I could set it up one day when I get rich!
